Non-functional Requirements

- Maximum uptime (performance)
- Data security
- Reliability
- Intuitive User experience & Design (UI / UX)
- Database
- Maximum scalability

Use case diagram of our proposed system.

The Software Development Model we are preferring to use is the 'Agile model'. We are expecting frequent changes in the requirements of the system. We expect to communicate with clients(TA) on a weekly basis. Anytime changes are acceptable. Update versions to be launched. Reduces total development time.
